

Level 4 — Joint bridge: EPOS2 IPM lifecycle FSM

Outside this FSM

arm_ipm and the direct moves change the drive without this FSM. A later goal then finds IPM active and fails at entry.

Transition table

IPM_FSM_ALLOWED. An illegal change raises RuntimeError.
UNINITIALIZED is in the table.
No code sets it.

Fault snapshot

Cleanup calls read_fault_snapshot().
The NucBox code does not define it.
The error is caught and logged.

Level 4 — Joint bridge: EPOS2 BridgeState
